

INFL-8 Emergency Antenna for Maritime VHF

Finally, we have an inflatable Emergency Antenna that can secure longer coverage in critical situations.

Shakespeare Galaxy-INFL8 is an inflatable antenna that can be inflated with a 16-gram CO2 cartridge or using the built-in air tube.

Galaxy-INFL8 has a 6m RG174 cable with a UHF connector and plugs for some VHF handheld radios.

INFL-8 is delivered in a practical orange pouch (24x13x6cm) that you easily can bring along if you need to abandon your vessel.

INFL-8 gives a gain of 3dB and has a total length of 1,5 meters when erected.
